

# HEXCODES UNCOATED MATERIALS

A hex code is a six-digit representation of colors in the RGB color model, using a combination of numbers and letters. While these colors were carefully selected by our marketing team, please use only for reference. Screen colors can vary due to differences in displays and lighting conditions, leading to inconsistent color representation across devices and environments.

## Rainbow® 80

## THE DESIGNERS CORNER

Our in-house team of design experts set out to provide you with as much information as possible, available right in your own design software. We know that swatch books and hand samples are essential tools in the design process, but for the time being, many of us are not able to work in our ideal setting. Whether you're working from home, or beginning the transition back into the workplace, we set out to bring our materials directly to your screen. Now, with our product colors available as Adobe® Swatches, a growing library of downloadable embossing patterns, and a new product search tool, you can take your Ecological Fibers swatch books on the go. Whether you're working from home, or just want to see our paper on your screen, our Designer's Corner is here to help.
